Notes

Email Notification: After successfully soft-deleting the user and updating the status in the DeleteAccountRequest table, an email notification is sent to the admin using Laravel's

built-in Mail facade. Ensure you have set up your mail configuration correctly in Laravel (config/mail.php). Data Preparation: The `$data` array contains information such as the user's name, email, and reason for deletion, which are passed to the `DeleteAccountRequestSendAdmin` mailable class. Admin Email: Replace `$adminEmail` with the actual email address of the admin who should receive the notification. You can fetch this dynamically from your application settings or configuration. Make sure you have created the `DeleteAccountRequestSendAdmin` mailable class that accepts these parameters (`$name`, `$email`, `$reason`) and formats the email content appropriately. This approach ensures that whenever a user is deleted, an email notification is sent to the designated admin email address wit
